# Unlocking the potential.

Joshua Risk delivers an optimum and justified security resource model. It improves operator response times by pulling in accurate data and intelligence from multiple channels, analysing and prioritising what's important, while automating many of the key security processes.

SCALE
It scales from a single location to global enterprise protection.

MAKES IT EASY
It is easy to configure, use and integrate with other systems.

GROWS WITH YOU
It is highly customisable, from its data types to the analytic model and user interface.

SINGLE PANE OF GLASS
It provides all the information and tools needed in one place.

THE ENGINE
The database ingests data and executes configured workflows, assigns tasks and responds to users

SOMETHING A BIT SPECIAL
The intelligence layer wrapped around the core engine delivers advanced analysis and insight.

1 Risk-based deployment models

2 Automation of standard and time-consuming processes

3 Control room convergence models

4 Incident response time reduced

5 Effective communication with workforce

6 Connecting multiple locations through to a centralised hub

7 Improved insight and situational awareness

8 Reduction in overall security resource levels at asset and management level

9 Identify non-compliance and improve performance metrics
