

Smart Features

Manage all operational security incidents and major events in a single system.

Control room operators manage multiple technology sets at once, but there are means of easing the burden. Joshua Risk is a cloud-based operational security management platform that not only keeps operations secure but Control Centres humming along.

Some key features include...

Manage all security and safety incidents, risks and operations in one platform

Gathering evidence and effective tracking of investigations through to closure

Set tasks and manage security compliance activities such as audits and testing

Communication module for mass notification, alerts and reporting

Integrate data sources and systems such as alarms giving a complete picture

User e-verification on all security information, documents and assessments

Pre-configured workflows to automate processes and guide set procedures

Integrate patrol and key management

Integrate and visualise threat intelligence feeds and alerts

Capture daily occurrences for patrols, shift-changes, lost & found and other activities

Manage key details of staff, contractors and external stakeholders

Display key metrics using customisable dashboards with built-in a reporting suite
